

Judgements

$\Gamma \vdash_i e \Leftarrow A \dashv \Gamma'$ - in context Γ (which has zero resources), e checks to have type A and consumes resources according to quantities from Γ' .

$\Gamma \vdash_i e \Rightarrow A \dashv \Gamma'$ - as above, but with type inference.

Notation

$\Gamma \vdash_i e \Leftarrow A \dashv \Gamma', s_A^i x : A$ is a shorthand for $\Gamma \vdash_i e \Leftarrow A \dashv \Gamma', r x : A$ with the condition $s_A^i \sqsubseteq r$.

$\Gamma \vdash_i e \Rightarrow A \dashv \Gamma', s_A^i x : A$ is a shorthand for $\Gamma \vdash_i e \Rightarrow A \dashv \Gamma', r x : A$ with the condition $s_A^i \sqsubseteq r$.
