Mateusz Pyzik

Subtraction of quantities

$r_1 - r_2$ is the least r' such that $r_1 \sqsubseteq r' + r_2$.

$r_1 - r_2$	0	1	?	$+$	$*$
0	0				
1	1	0			
?	?	0	0		
$+$	$+$	$*$	$+$	$*$	$+$
$*$	$*$	$*$	$*$	$*$	$*$

"Arithmetic" order on quantities

The arithmetic order on quantities is $0 \leq 1 \leq ? \leq + \leq *$. The idea is to compare the quantities by how "big" they are.

Division with remainder

$a/b = (q, r)$ when $a = b \cdot q + r$, with q as large as possible and r being as small as possible according to the arithmetic order. Note that $a/b = q$ means that $r = 0$.

r_1/r_2	0	1	?	$+$	$*$
0	$*$	0	0	0	0
1	$(*, 1)$	1	$(0, 1)$	$(0, 1)$	$(0, 1)$
?	$(*, ?)$	?	?	$(0, ?)$	$(0, ?)$
$+$	$(*, +)$	$+$	$(*, 1)$	$+$	$(*, 1)$
$*$	$(*, *)$	$*$	$*$	$*$	$*$

Decrement variable in context

$$\cdot - x = \textbf{undefined}$$
$$(\Gamma, r\, x : A) - x = \Gamma, (r - 1)\, x : A$$
$$(\Gamma, r\, y : A) - x = \Gamma - x, r\, y : A$$
$$(\Gamma, r\, x : A := e) - x = \Gamma, (r - 1)\, x : A := e$$
$$(\Gamma, r\, y : A := e) - x = \Gamma - x, r\, y : A := e$$
$$(\Gamma, h : P) - x = \Gamma - x, h : P$$

Context division with remainder

$$\overline{\cdot/r = \cdot}$$

$$\frac{\Gamma/q = (\Gamma_1, \Gamma_2) \quad r/q = (r_1, r_2)}{(\Gamma, r\,x : A)/q = ((\Gamma_1, r_1\,x : A), (\Gamma_2, r_2\,x : A))}$$

$$\frac{\Gamma/q = (\Gamma_1, \Gamma_2) \quad r/q = (r_1, r_2)}{(\Gamma, r\,x : A := e)/q = ((\Gamma_1, r_1\,x : A := e), (\Gamma_2, r_2\,x : A := e))}$$

$$\frac{\Gamma/q = \Gamma'}{(\Gamma, h : P)/q = ((\Gamma', h : P), (\Gamma', h : P))}$$

Using variables

$$\frac{\Gamma(x) = A}{\Gamma \vdash x \Rightarrow A \dashv \Gamma - x}$$

Functions

$$\frac{\Gamma, r\,x : A \vdash e \Leftarrow B \dashv \Gamma', r'\,x : A \quad r' \sqsubseteq 0}{\Gamma \vdash \lambda\,x.\,e \Leftarrow r\,A \to B \dashv \Gamma'}$$

$$\frac{\Gamma \vdash f \Rightarrow r\,A \to B \dashv \Gamma_1 \quad \Gamma_1/r = (\Gamma_2, \Gamma_3) \quad \Gamma_2 \vdash a \Leftarrow A \dashv \Gamma_4}{\Gamma \vdash f\,a \Rightarrow B \dashv \Gamma_3 + r\,\Gamma_4}$$

Useful shorthand (when not enough space):

$$\frac{\Gamma, r\,x : A \vdash e \Leftarrow B \dashv \Gamma', 0\,x : A}{\Gamma \vdash \lambda\,x.\,e \Leftarrow r\,A \to B \dashv \Gamma'}$$
